As you drive the WIS 100 interchange, there are many new features. Watch your speed and pay attention to signage as many decision points affecting lane changes and exits have been altered. Please note that your GPS may not yet be up to date with the new interchange design, so watch directional signage closely.

WIS 100 INTERCHANGE KEY ACCESS POINTS

The new WIS 100 interchange features a U-Ramp that drivers will utilize to access both I-94 WEST and I-94 EAST. All traffic wishing to access I-94 will enter the ramp at the same point, north of I-94. I-94 WEST traffic will move to the right lane, while I-94 EAST traffic will move to the left lane. Be mindful that traffic entering I-94 EAST will need to merge into the through-lanes, if not continuing to I-894 EAST (SB). Traffic entering I-94 EAST, at WIS 100, will not be permitted to access US 45 NORTH during peak hours.

PLEASE NOTE: The WIS 100 interchange will not be in its final design at this time. There will be additional impacts, throughout 2015, while crews work to construct additional auxiliary and ramp lanes that will connect to the reconstructed Zoo Interchange.
